

Embryonic Stem Cells vs. Adult or non-ES Cells

Adult or non-ES cells used for many purposes but ES cells ARE NOT

? <http://krla.org/>

What is stem cell research? Is it right? What is the difference between adult and embryonic stem (ES) cells? This topic takes study. But, very simply, the ES cells are obtained from human embryos. Prolifers know that life begins at conception, as do scientists! Therefore to destroy an embryo for research destroys human life. Please watch Dr. Prentice's video which is less than two minutes.
